Method Development Trials

Trial 1

Mobile Phase: Acetonitrile: Phosphate buffer (pH = 5.5)

Ratio: (50: 50 v/v)

Flow rate: 1 mL/min

Observation: Poor resolution, poor reproducibility, merging of peak

Figure S1: Trial 1 HPLC chromatogram

Trial 2

Mobile Phase: Acetonitrile: Phosphate buffer (pH = 4.0)

Ratio: (40: 60 v/v)

Flow rate: 1 mL/min

Observation: Broad peak, poor reproducibility.

Figure S2: Trial 2 HPLC chromatogram

Trial 3

Mobile Phase: Acetonitrile: Phosphate buffer (pH = 3.0): Methanol

Ratio: (30: 50: 20 v/v)

Flow rate: 1 mL/min

Observation: Merging of peak

Figure S3: Trial 3 HPLC chromatogram

Trial 4

Mobile Phase: Acetonitrile:
O-phosphoric acid buffer (pH = 2.3)
Ratio: (50: 50 v/v)
Flow rate: 1 mL/min Observation:
No peak separation

Figure S4: Trial 4 HPLC chromatogram

Trial 5

Mobile Phase: Acetonitrile: Phosphate buffer (1.0 mM) (pH = 2.5)

Ratio: (40: 60 v/v)

Flow rate: 1 mL/min

Observation: Less theoretical plates in CHL & MET, capacity of buffer affected the peak properties

Figure S5: Trial 5 HPLC chromatogram

Mobile Phase: Acetonitrile: Phosphate buffer (0.005 mM) (pH = 2.5)

Ratio: (50: 50 v/v)

Flow rate: 0.7 mL/min

Observation: Satisfactory peak separated which fulfils the system suitability parameters.
